

Distinguishing the Difference: COVID-19 vs. Allergies vs. Flu

Coronavirus: A large family of viruses that cause illness ranging from the common cold to more severe respiratory diseases. The viruses are transmitted between animals and people.

COVID-19: A mutated version of the coronavirus - called novel. It was first detected in Wuhan, China in November 2019. On March 11, the World Health Organization declared COVID-19 a pandemic.

COVID-19

What to do if you are sick?

- Call your doctor and discuss your symptoms and potential exposure. Your doctor will decide if you should be tested for coronavirus.
- Stay home and self-quarantine yourself. Separate yourself from other people in your home. Wear a facemask when around other people if instructed to do so by your doctor.
- Cover your cough and sneezes, or cough into your elbow.
- Wash your hands often.
- Follow evidence-based guidance from CDC and other credible sources.
